REPLY TO RESTRICTION REQUIREMENT DATED MARCH 3, 2009

This Reply is in response to the Restriction Requirement mailed on March 3, 2009 in connection with the above-identified patent application.

The Examiner requires restriction to one of the following three groups of claims:

Group I – Claims 1-10 and 27-34, drawn to a network device interaction system with an application component that seeks to utilize a network device and a configuration system that automatically configures the network device, i.e., loading the driver, to operate with the application component, classified in class 719, subclass 321.

Group II – Claims 11-15 and 21-26, drawn to a network device configuration system with a monitor component that monitors a local area network for the arrival of network devices and a configuration component that automatically configures a network

device detected by the monitor component to operate in conjunction with a computer system, classified in class 709, subclass 224.

Group III – Claims 16-20 and 35-40, drawn to a dynamic network device configuration system comprising an association component that specifies an association of the network component with at least one other active network component, an enumerator component that generates a physical device object (PDO) component that provides information about the device to be configured, and a Plug and Play system that utilizes the PDO component that exposes device functionality to associated network components, classified in class 709, subclass 220.

Applicants' representative hereby elects with traverse Group I (Claims 1-10 and 27-34, drawn to a network device interaction system with an application component that seeks to utilize a network device and a configuration system that automatically configures the network device, i.e., loading the driver, to operate with the application component, classified in class 719, subclass 321) for further prosecution on the merits.
